SUMMARY

B.Tech Computer Science student with hands-on experience building full-stack web applications, frontend interfaces, database-backed projects, AI-assisted workflows, and deployed portfolio projects. Experienced with React, Next.js, TypeScript, Supabase, PostgreSQL, Convex, Tailwind CSS, Git, GitHub, and Vercel through hackathons, ideathons, freelance work, and project-based learning.

TARGET ROLES

Cloud Engineer Intern, Full-Stack Developer Intern, Frontend Developer Intern, Web Developer Intern, Software Engineering Intern, Freelance Web Developer

EDUCATION

Manipal University Jaipur - B.Tech in Computer Science and Engineering

Expected 2029

- Current GPA: 7.0; completed first year coursework while building practical projects in full-stack development, APIs, UI/UX, databases, and cloud-related tools.

Army Public School - Class 10: 86% | Resonance - Class 12: 82%

- Academic background supported by early exposure to robotics, drone building, line follower systems, and technical workshops.

TECHNICAL SKILLS

Languages: C, Python, TypeScript, HTML

Frontend: React.js, Next.js, TypeScript, JavaScript, Redux, Tailwind CSS, shadcn/ui, Radix UI, HTML, CSS, responsive web design, UI/UX

Backend and Database: Node.js, PostgreSQL, Supabase, Convex, Convex Auth, Convex Storage, relational data modeling, Row Level Security (RLS), REST APIs, authentication

Cloud, AI, and Workflows: Google Cloud, Firebase, Gemini API, Inngest, cloud computing training, AI prompting, background jobs, deployment workflows

Developer Tools: Git, GitHub, GitHub Docs, Vercel, Netlify, ngrok, Google Stitch, OpenAI Codex

Additional Technical Skills: AutoCAD, drone building, line follower robots, GIS map integration, robotics fundamentals, analytical problem solving

PROJECTS

S2C - AI Sketch-to-Design Learning Project

Live: <https://ai-saa-s-sketch-to-design.vercel.app>

- Built a full-stack AI SaaS-style design tool using Next.js, React, TypeScript, Convex, Inngest, Redux, Tailwind CSS, shadcn/ui, Radix UI, and Gemini API, covering authentication, projects, infinite canvas editing, autosave, and PNG/JSON exports.
- Implemented canvas tools including frames, shapes, text, free drawing, eraser, layers, selection, zoom, pan, and generated UI rendering.
- Integrated Convex database, Convex Auth, Convex Storage, Inngest, and Gemini-compatible API routes for database operations, authentication, file storage, background jobs, and AI workflow orchestration.
- GitHub: <https://github.com/saatvikraghuvanshi-lab/Ai-SaaS-Sketch-To-Design>

VibeBatch - Full-Stack Web Application

Live: <https://www.vibebatch.net/>

- Architected relational PostgreSQL schemas in Supabase to support user profiles, friend relationships, trait voting, messages, story cards, and premium identity flows.
- Engineered data privacy and security patterns using Supabase Row Level Security (RLS) for user-owned profile, relationship, message, and trait data.
- Implemented secure user authentication and full-stack product workflows with a React/Vite frontend and Supabase Auth/database services.
- GitHub: <https://github.com/saatvikraghuvanshi-lab/VibeBatch>

ResilienceOS - Disaster Management Web Platform

Live: <https://resilienceos.vercel.app/>

- Built frontend and backend workflows for a unified disaster management system developed during Startup Forge Ideathon, including admin, responder, civilian, training, strategy, and report views.
- Modeled emergency-response data flows for map simulation, responder coordination, civilian SOS reporting, readiness training, and operational information access.
- GitHub: <https://github.com/saatvikraghuvanshi-lab/RESILIENCEOS>

JanSahayak - Public Assistance Web Application

Live: <https://jansahayak1.netlify.app/>

- Developed and deployed a civic-help oriented web application for a college Vibeathon, using AI-assisted workflows to support government-scheme discovery and eligibility guidance.
- Placed in the top 5 with a working prototype covering login, scheme discovery, filters, user dashboards, and an AI assistant flow.

TerraPulse Pro - GIS-Oriented Web Application

Live: <https://terrapulsepro1.netlify.app/>

- Built and deployed a GIS-oriented web application focused on map-based field visualization, satellite imagery views, NDVI-style analytics, and rural dashboard workflows.
- Strengthened experience in integrating geospatial data, map interfaces, technical metrics, and user-facing analytics into accessible web interfaces.

EXPERIENCE

Freelance Full-Stack Developer - VibeBatch

- Delivered a live web product for a freelance project, handling full-stack development responsibilities, frontend implementation, database-backed workflows, and deployment readiness.

Cloud Computing Training - Training Phase

- Currently building foundational cloud computing knowledge aligned with cloud engineering internships, deployment workflows, backend services, and infrastructure fundamentals.

ACHIEVEMENTS AND CERTIFICATIONS

- Startup Forge Ideathon - 4th Place Finisher, GCEC Global Foundation; recognized for developing ResilienceOS during a 48-hour build.
- Career Guidance Session: Artificial Intelligence and Prompt Engineering - GradGuru Innovations.
- Technical workshops and hackathons: Rewind & Recode National Hackathon, Robotics Workshop at Techfest IIT Bombay, WRC Quadcopter Challenge, Fastest Line Follower Challenge, and Machine Learning Workshop at Times Technoxian 2019.
